

HSYCO 4.0

Beta release launch

The creation of open, holistic automation and control solutions made possible.

Even more powerful and completely redesigned.

Experience a revolutionary **Project Editor** with tree lists, lightning-fast search filters, fresh skins, new icon sets and object palette, and dynamic control over every graphic element's attributes. Unleash your creativity!

Upgraded **Status Browser** featuring advanced filters and real-time datapoint settings for debugging.

Introducing new **Wizards** for effortless initial setup and seamless configuration backup and restore management.

Unlock advanced data management with the new **Table Object**, enabling quick and easy development of complex database applications.

Discover the power of our new multi-tab **Code Editor** with log and datapoint status previews, and variables management.

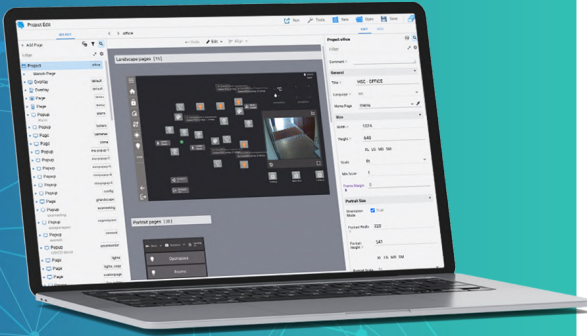

Fully updated documentation, featuring dozens of tutorials available both online and offline, right within the HSYCO Manager.
